Information Systems students with hands-on experience spanning the entire data lifecycle, from building automated ETL pipelines to deploying machine learning models. Proven track record in public sector data migration, web scraping architecture, and developing explainable AI applications. Passionate about transforming chaotic, real-world datasets into structured, impactful solutions that drive public innovation and data transparency.

EDUCATION

Universitas Negeri Semarang Undergraduate Information System Student GPA: 3.67/4.00 Expected graduation June 2027	Aug 2023 – Present
---	--------------------

PROJECT

Migration Pipeline Satu Data Jateng <i>Python, Pandas, REST APIs, Pytest</i>	April – May 2026
--	------------------

- Developed a dual-mode ETL pipeline to audit and transfer legacy government data portals to a new repository, ensuring standards compliance. Use audits to detect duplicates, schema inconsistencies, and anomalies, generating an Excel report with highlights and review instructions. A human-in-the-loop verifies data points that require review after the audit. Verified data is migrated via auto-mapping and progress tracking to prevent duplication. If interrupted, migration resumes from the last checkpoint. Use a testing case to ensure the code runs properly.

Credit Scoring Review System with Explainable AI for MSMEs <i>Python, XGBoost, FastAPI, Next.js, SHAP</i>	April 2026
---	------------

- Develop an alternative credit scoring prototype for UMKM aligned with OJK guidelines. Based on the ACS framework from POJK No. 29/2024, MSME owners can submit their business profiles and alternative data. The system then uses Explainable AI to deliver transparent explanations of the credit score, risk category, and recommendations. These outcomes can guide lenders or cooperatives in their decision-making.

SuaraWarga Voice-First Disaster Reports <i>Python, FastAPI, JavaScript, LLM, SQLite, HTML</i>	Feb 2026
---	----------

- Create a voice-enabled Progressive Web App (PWA) that allows citizens to report disasters in high-stress, low-bandwidth settings. Utilize Google Gemini 1.5 Flash AI to automatically transcribe noisy audio and extract structured data such as hazard type, severity, and location. Authorities can then review these results for quick response during emergencies.

EXPERIENCE

Statistics and Data Management (Internship) Dinas Komunikasi, Informatika, dan Digital Provinsi Jawa Tengah – Semarang, Indonesia	Jan - June 2026
---	-----------------

- Building the automated Migration data from the old repository to the new repository with an ETL Pipeline to ensure the standard of data in the new repository.
- Check and migrate 1000+ data to the new repository with the automated migration data program and ensure the standard is implemented.
- Participate in the review and evaluate the regulation and standardization of Statistik Sektoral Jawa Tengah.
- Help to check 300 data structures that are made by the partner according to the standard or not

Machine Learning & Data Pipeline Development (Internship) Wiyora Technology – Semarang, Indonesia	Oct - Dec 2025
---	----------------

- Building the automated data-collection pipeline using Python and Playwright to crawl Twitter, Facebook, and Instagram on a scheduled basis.
- Preparing and cleaning collected data for downstream sentiment-analysis model development in an

ongoing multi-module web project

Freelance AI-Language Trainer (Indonesian Writer)

Jan - Mar 2025

Outlier – San Francisco (remote)

- Evaluated and ranked over 10 AI-generated responses to ensure accuracy and consistency, while providing constructive feedback and refining training prompts to enhance the AI's natural language capabilities according to client specifications.
- Engaged in remote collaboration for data annotation and analysis of AI outputs, focusing on evaluating their accuracy, relevance, and adherence to stylistic guidelines, with the goal of reducing instances of model "hallucinations".

Management Staff in the production Partner Management Division (Internship)

Sep 2021 - Aug 2022

PT Petrokimia Gresik – Gresik, Indonesia

- Coordinated with 150+ partners to meet production goals and quality standards. Assisted in analyzing production data and evaluating performance to drive process improvements. Sometimes checks are conducted at the partner factory to verify quality and SOPs, and to coordinate with the partner as needed.

Leadership & Activities

Programming Group Member

Mar 2024 - Feb 2025

I-Secret of Computer Science UNNES – Semarang, Indonesia

- Invited and coordinated over 40 students to enhance the learning community in emerging technologies. Collaborated with peers to design workshop materials and manage logistics for a smooth educational experience.

SKILLS

- **Technical Skills:** Python, SQL, Machine Learning, Pandas, NumPy, TensorFlow, Scikit-Learn, Matplotlib, AI, Data Analysis, Data Science, Data Visualization, Data Processing, PostgreSQL, ETL/ELT, Streamlit, Looker Studio, Tableau.
- **Interpersonal Skills:** Time Management, Problem Solving, Adaptability, Analytical Thinking, Leadership, Communication, Teamwork, Attention to detail, Organization.
- **Language:** Indonesian, English.
